

## Neighborhood Litter Map Lesson

### Example of a Solution

Our group thinks that, to keep litter off the ground, there should be more trash cans on school grounds. We think that this will help keep litter off the ground because it will give people more places to throw away their trash instead of dropping it on the ground.

Money would be needed to buy more trash cans. We found trash cans online that could go outside. They cost \$600 each. We think it would take a couple weeks to order the trash cans and wait for them to be delivered. We would want the trash cans placed around the parking lot near parking spaces because that's where we saw the most trash. A challenge we think we would face is that new trash cans might be too expensive. A way we could face this challenge is to have a fundraiser for the school to get money to buy new trash cans.
